PROJECT REPORT OF DIGITAL LITERACY

Submitted By: **Arnav Khandelwal**

Reg.No: **25BSA10115**

Programme: **B-TECH**

Branch: CSE(Cloud Computing)

Introduction

As the newly appointed Student Digital Ambassador, my goal is to guide fellow students in effectively using digital technologies in their academic and career journeys. In today's era, digital literacy is not limited to basic technical knowledge; it also involves using digital tools responsibly while maintaining professionalism.

For my initial assignment, I will develop a comprehensive Digital Literacy Portfolio. This framework will help students build key skills such as creating a strong online professional presence, managing their digital footprint, and practicing appropriate digital communication. The portfolio will act as a useful resource, integrating best practices, real-world case studies, and relevant digital tools that can support students in both their academic and professional development.

Furthermore, this initiative aims to foster a campus-wide culture of responsible digital citizenship by promoting cybersecurity awareness, data protection, and ethical use of social media. The completed portfolio will be presented to the faculty committee for evaluation and later shared with students, providing them with the knowledge and skills required to interact with digital platforms safely and professionally.

Task - 1 Create a Digital Literacy Awareness Infographic

I created a one-page Digital Literacy infographic using Canva that fulfills the requirements of this project. I selected this platform because it offers advanced design features along with a user-friendly interface, making it suitable for users at any skill level to produce professional-quality work. The infographic is organized into three key sections that form its core structure.

The first section explains digital literacy as the ability to use modern technological tools responsibly and effectively. The second section introduces a productivity framework for students, highlighting important academic tools such as cloud-based platforms and collaboration software that can enhance learning outcomes. The third section focuses on digital security practices, emphasizing essential measures like strong internet safety protocols, multi-factor authentication, and protection of personal data.

While designing, I focused on creating a layout that is easy to understand and visually appealing. By using simple text, relevant icons, and a balanced color scheme, I aimed to keep students engaged and ensure clarity. The most challenging yet rewarding part was organizing a large amount of information into a single page while maintaining both completeness and an attractive design.

Task - 2 Build Your Student Digital Porolio

To build a strong and complete digital identity, I have created professional profiles on LinkedIn, GitHub, and ResearchGate. I began by setting up my LinkedIn profile, where I included verified details of my B.Tech in Computer Science and Engineering. This has helped me start building a professional network. I plan to use LinkedIn as an active portfolio to showcase my technical certifications, projects, and internship experiences to industry professionals.

I chose GitHub as my primary platform for technical work because it supports both skill development and professional collaboration. Through its version control system, I will manage my coding projects and contribute to open-source initiatives, which will help me enhance my programming skills.

Additionally, I included ResearchGate in my digital presence to connect practical learning with academic research. This global research platform will allow me to explore advanced research techniques and stay updated with emerging technologies throughout the next four years.

Task - 3 Explore Coding & Collaboration Platforms

I used HackerRank to strengthen my technical abilities and Google Workspace to design assessment tools for this project. On HackerRank, I completed the basic “Solve Me First” challenge, which helped me build fundamental problem-solving skills, improve my understanding of syntax, and develop logical thinking—forming a strong base for my programming journey.

At the same time, I created a Digital Literacy Awareness Quiz using Google Forms. The quiz included five questions, combining multiple-choice and short-answer formats. By linking the form to Google Sheets, I set up an automated system for collecting and analyzing responses. This system allows users to evaluate their performance and identify areas where they need improvement.

I plan to continue using these platforms throughout my academic journey. Regular practice on HackerRank will enhance my algorithmic thinking, which is crucial for projects, exams, and job interviews. Meanwhile, Google Workspace will support effective collaboration, streamline survey management, and simplify data handling. Together, these tools will help me achieve academic success and prepare for future career opportunities.

Task - 4 Draw Professional Email & Request Guide

In higher education, many conflicts arise due to improper communication through email. Sending messages to faculty without a clear subject line, appropriate greeting, or sufficient context—such as writing urgent requests like “Send marks fast”—is generally viewed as highly unprofessional. A lack of digital etiquette often leads to

misunderstandings, delayed responses, and can negatively impact a student's reputation.

To avoid such issues, students must learn and consistently practice professional email standards. This includes writing a clear and relevant subject line, starting the email with a polite greeting, and expressing their query in a respectful and well-structured manner. Ending the message with a proper closing is also essential. By following these communication guidelines, students can minimize confusion, improve response times, and build a positive professional image, ensuring their messages are taken seriously and respected.

Task - 5 Cybercrime Awareness Case Study & Prevention Guide

Conclusion

The Digital Literacy Portfolio functions as an assessment tool which evaluates all essential skills required by students to succeed in their academic studies and continue their professional growth in modern society. I learned practical digital ecosystem skills by completing designated projects which required me to establish professional networking profiles and practice coding skills and develop visual data representations through infographics and study official digital communication techniques. The project proved that people need to practice responsible digital citizenship which requires them to know social media etiquette and use safe communication approaches and study cyber threat materials particularly phishing attacks.

I enhanced my technical abilities and strategic communication skills through my daily use of LinkedIn and HackerRank and Google Workspace which function as standard collaboration tools used in various industries. My research on cybersecurity defense techniques and incident response systems has established my need for constant online monitoring to protect my digital activities.

The process of developing my portfolio has enhanced my digital strategy skills while I received training to perform my responsibilities as a Student Digital Ambassador. I now possess the ability to teach my peers about building effective online identities which enable them to write professionally while securing their digital activities.
